

The logo features a stylized, rounded rectangular shape with a white outline and a blue fill, resembling a surgical knot or a specific suture design. It is centered at the top of the page, set against a background of horizontal blue and white stripes.

ERGON SUTRAMED®

MADE IN ITALY

SUTURE CHIRURGICHE | SURGICAL SUTURES | SUTURAS QUIRÚRGICAS

CE
(0373)

Company history

Ergon Sutramed was established in 1963 as a surgical suture division of Ciba Geigy Group in Torino. In 1998 the company was purchased from Ciba Geigy and moved to a brand new location of approximately 4.000 square meters in the beautiful surroundings of Magliano dei Marsi, central Italy, only three quarters of an hour far from Rome.

In the new manufacturing plant the entire production cycle is completed by using state of the art technology and selected first choice raw materials under the strict control of our Quality Control Department and in accordance with CE specifications, UNI EN ISO 9001:2008 and UNI EN ISO 13485:2004 for the European market and FDA approval for the manufacturing unit.

Ergon Sutramed range of products is wide and complete. It includes sutures suitable for all surgical fields, available through three divisions, human, dental and veterinary and specifically designed to assist professionals in all aspects of surgery. In this richly varied assortment there are innovative materials such as synthetic absorbable fibres, braided and monofilament, long, mid and short term absorption, together with the more traditional sutures: silk, nylon, polyester, polypropylene, PVDF and stainless steel. Recently the product range has been widened including barbed sutures, titanium wire, sutures for ophthalmology and cardiovascular surgery with an aim to continuously improve the suture line available.

Ergon Sutramed is committed to meet customers' needs, always producing high quality products and offering the best service. With this in mind new needle-thread combinations, not already included in the catalogue, may be manufactured to meet demand by modifying type of needle, suture thread length and size. Today, Ergon Sutramed exports to 23 different countries with great satisfaction to end users and distributors.

PROFILO DEGLI AGHI ATRAUMATICI

ATRAUMATIC NEEDLE PROFILE

PERFIL DE LAS AGUJAS ATRAUMÁTICAS

1

● **AGHI CILINDRICI**

Aghi a punta affusolata e a corpo rotondo la cui parte centrale è appiattita per facilitare la presa sul porta aghi

TAPER POINT NEEDLES

Taper needles with a flat area in the middle section to have an easy grip with the needle holder

AGUJAS CILINDRICAS

Agujas cilíndricas con una zona plana central que facilita el agarre con el soporte de la aguja

*AGO NERO-BLACK NEEDLE-AGUJA NEGRO

2

⊙ **AGHI CILINDRICI ULTRA**

Caratterizzati da uno speciale disegno della punta con microaffilature su più lati che migliorano la penetrazione dell'ago anche dopo ripetuti passaggi

ULTRA TAPER NEEDLES

Characterized by a specially designed tip with micro tapered edges what greatly improve needle penetration even after several stitches

AGUJAS ULTRA

Agujas de cuerpo cilíndrico, con una pequeña punta triangular, caracterizada por un micro afilado y especialmente diseñadas para una mejor penetración, menor trauma tisular incluso después de varias puntadas

*AGO NERO-BLACK NEEDLE-AGUJA NEGRO

3

◐ **TAPER-CUTTING**

Aghi a corpo cilindrico e punta tagliente

TAPER-CUTTING

Taper needles with external cutting edge

TAPER-CUTTING

Agujas de cuerpo cilíndrico con un borde de corte externo

*AGO NERO-BLACK NEEDLE-AGUJA NEGRO

4

◑ **AGHI TRIANGOLARI**

Aghi a corpo triangolare con lato esterno tagliente

CUTTING EDGE NEEDLES

Triangular needles with external cutting edge

AGUJAS TRIANGULARES

Agujas triangulares con un borde de corte externo

*AGO NERO-BLACK NEEDLE-AGUJA NEGRO

5

▲ **AGHI TRIANGOLARI A INTERNO TAGLIENTE**

Aghi a corpo triangolare con lato interno tagliente

REVERSE CUTTING EDGE NEEDLES

Triangular needles with internal cutting edge

AGUJAS TRIANGULARES CORTE INTERNO

Agujas triangulares con corte interno

6

▼ **AGHI TRIANGOLARI A PUNTA DI PRECISIONE**

Aghi a corpo triangolare, con lato esterno tagliente, affilati a mano con punta estremamente precisa e penetrante

PRECISION POINT CUTTING EDGE NEEDLES

Triangular needles with external cutting edge, hand sharpened and extremely penetrating point

AGUJAS TRIANGULARES CON PUNTA DE PRECISION

Agujas triangulares con corte externo, afilado manual, y con punta extremadamente penetrante

7

▬ **AGHI A SPATOLA**

Aghi a sezione trapezoidale con due lati taglienti

SPATULA NEEDLES

Trapezoidal needles with two cutting edges

AGUJAS ESPATULADAS

Agujas trapezoidales con dos bordes cortantes

8

● **AGHI A PUNTA SMUSSA**

Aghi a corpo cilindrico e punta smussa

BLUNT POINTED NEEDLES

Round needles with a blunt point

AGUJAS CON PUNTA ROMA

Agujas cilíndricas terminadas en punta roma redondeada

Molecola	Poli (glicolide-co-ε-caprolattone).
Tipo di filo	Sutura sintetica assorbibile monofilamento a rapido assorbimento.
Colore	Non colorato.
Diametri ed aghi standard	Diametri EP da 0,5 a 5; USP da 7/0 a 2; Il Monofast viene assemblato con aghi atraumatici in acciaio inox AISI 300 o AISI 400.
Resistenza tensile	Dopo 5 gg dall'impianto permane ~ 48-55% della resistenza tensile, dopo 10 gg ~ 25% della resistenza tensile, dopo 20 gg ~ 2% della resistenza tensile.
Assorbimento	Completo entro 50-60 giorni dall'impianto.
Indicazioni	Nella riapprossimazione dei tessuti molli e/o dove sia richiesto un assorbimento rapido della sutura.

Composition	Poli (glicolide-co-ε-caprolattone).
Description	Synthetic monofilament short term absorption suture.
Colour	Undyed.
Sizes and standard needles	EP from 0,5 to 5; USP from 7/0 to 2. Monofast is attached to AISI 300 or AISI 400 stainless steel atraumatic needles.
Tensile strength	After 5 days from implant ~ 48-55% of the tensile strength remains, after 10 days ~ 25%, after 20 days ~ 2%.
Absorption	Complete within 50-60 days.
Indications	In soft tissues approximation, where a fast absorption of the suture is required.

Molécula	Poli (glicolide-co-ε-caprolattone).
Tipo de hilo	Sutura sintética absorbible monofilamento de absorción rápida.
Color	Incoloro.
Diámetro y agujas	Diámetro EP de 0,5 a 5; USP de 7/0 a 2; El Monofast se presenta montada con agujas atraumáticas de acero inoxidable AISI 300 o AISI 400.
Fuerza tensil	Después de 5 días de implantación mantiene ~ 48-55% de la fuerza tensil, ~ 25% después de 10 días, ~ 2% después de 21 días.
Absorción	Completa a los 50-60 días de la implantación.
Indicaciones	En la aproximación de los tejidos blandos y donde se necesite una absorción rápida de la sutura.
